

Jason Anderson
852 HW1

$$\begin{aligned}P[X > 2.0], \lambda = 0.5 \\&= 1 - P[X \leq 2.0] \\&= 1 - (1 - e^{-0.5(2.0)}) \\&= 1 - (1 - 0.36788) \\&= \mathbf{0.36788}\end{aligned}$$

$$\begin{aligned}P[X \leq 5.0], \lambda = 0.5 \\&= 1 - e^{-0.5(5.0)} \\&= 1 - 0.08208 \\&= \mathbf{0.91792}\end{aligned}$$

$$\begin{aligned}P[1 < X \leq 3], \lambda = 0.5 \\&= P[X \leq 3] - P[X \leq 1] \\&= (1 - e^{-0.5(3)}) - (1 - e^{-0.5(1)}) \\&= (1 - 0.22313) - (1 - 0.60653) \\&= 0.77687 - 0.39347 \\&= \mathbf{0.3834}\end{aligned}$$

on avg 2 seconds, off avg 5 seconds
over 1 second timescale, $\lambda(\text{on}) = 2/7$
for any given second ($x = 1$),
 $P[\text{on}] = (2/7)e^{-(2/7)1}$
 $P[\text{on}] = 0.21471$
If on state = 20Mb/s,
 $20\text{Mb/s} * 0.21471 = \mathbf{\text{average } 4.294\text{Mb/s}}$
